

### How close is the care facility to the highway? A picture's worth a thousand words.

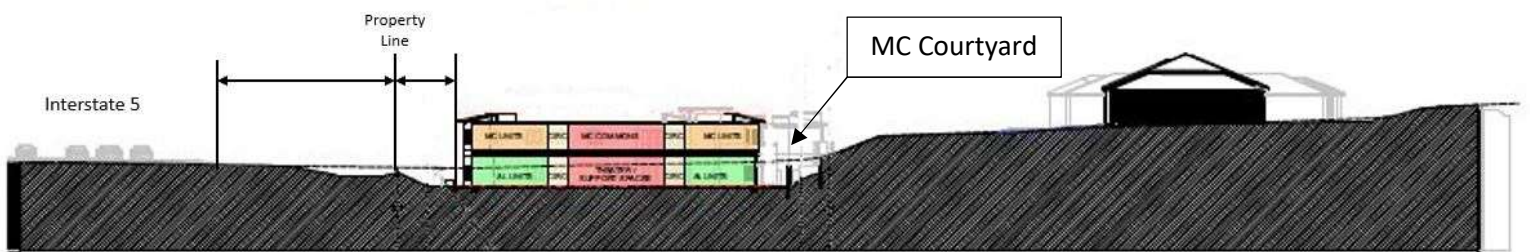

The building is well situated on the lot well away from the freeway. The driveway and circle are in between the building and the property line. The minimum setback from the property is 10 feet and the freeway is setback 55 feet from the property line giving a minimum of 65 feet. The proposed design of the community has a corner of the building about 82 feet from the freeway at its closest point with much of the west side of the building well over 100 feet from the freeway. The opponents of the project want you to believe that the care facility is just 10' from the highway. This is not accurate.

The following drawings are included in the EIR and provide a representative view of the placement of the building in relation to the freeway and the neighboring homes. Section A3.2 02 is the closest point that the building approaches the freeway. At that point the freeway is 82' from the building.

Open spaces available to the residents to enjoy outdoors are on the east side of the building where highway noise will be muted by the building. Note how well protected from the freeway these areas are.
